Price 8s. 6d., post free.

BIRDSNESTING;

BEING A COMPLETE DESCRIPTION OF

THE NESTS AND EGGS

OF

BIRDS WHICH BREED IN GREAT BRITAIN AND IRELAND.

By EDWARD NEWMAN, F.L.S., F.Z.S.

This work is written expressly for the use of out-of-doors naturalists and that better class of schoolboys who take up Natural History as an instructive recreation. Under each species will be found

1. The English name.
2. The Latin name.
3. The situation in which the nest is to be found.
4. The materials of which the nest is built, together with any particulars of its shape which will assist in determining by what bird it is built.
5. The number and colour of the eggs, describing such variations as are occasionally met with.

Price 1s. 1d., post free.

Address, "EDWARD NEWMAN, 9, Devonshire Street, Bishopsgate, London, N.E."

SUGGESTIONS FOR FORMING COLLECTIONS OF BIRDS'

EGGS.—These 'Suggestions' are from the pen of Mr. NEWTON, than whom no one was ever better qualified for the task. The first object is to identify the egg, to be quite sure to what bird it belongs. Mr. NEWTON justly considers that an egg wrongly named is worse than no specimen at all. As soon as the egg is positively identified the next object is to authenticate it, by attaching such a mark as can neither be removed nor obliterated. Then follows a full and most minute description of the mode of blowing eggs, with figures of all the instruments necessary to be used; it is expressly explained that no hole should be visible, and it is also explained how to avoid this; on no account whatever should there be a hole at either end, and there should be but one hole. The difficulty of removing the contents from eggs that have been sat on and nearly hatched is entirely overcome; and the proper instruments to use are not only described but figured, and the requisite information is given where they may be obtained. Finally, we are shown how to strengthen the shell of delicate eggs before drilling the hole through which their contents are to be emptied.—Price 7d., post free.

THE ZOOLOGIST LIST OF BRITISH BIRDS, compiled by the late J. D. SALMON, F.L.S., from Mr. YARRELL's standard work on British Birds, comprising all the additions and corrections necessary up to the 1st of January, 1861.

Price, printed on both sides, 3d., post free; or on one side only for Labels, 5d., post free.

THE ZOOLOGIST LIST of EUROPEAN BIRDS which do not occur in Great Britain.

Printed on one side only for Labels. Price 3d., post free.

AN ESSAY ON THE EMPLOYMENT OF PHYSIOLOGICAL CHARACTERS IN THE CLASSIFICATION OF ANIMALS. Being the substance of a Paper read before the Greenwich Natural History Club, December 6, 1856. By EDWARD NEWMAN, F.L.S., &c., &c.—Price 1s., post free.

A HISTORY OF BRITISH FERNS.—This work is illustrated by one hundred engravings, which are carefully executed by some of our first artists, from the author's own drawings on the wood, and consist of studiously accurate figures of every species and variety of fern found in Great Britain. Under each species there is also a most minute description and ample list of localities, and full directions for cultivating. "It is just such books as this which render Natural History so attractive to everybody who finds other pleasures in a country life besides hunting, coursing, fishing and shooting."—*Gardener's Chronicle*. "A valuable present to the lady botanist."—*Gardener's Magazine*. "No lady in the country ought to be without it."—*Gardener's Gazette*. Price 18s., post free.

BRITISH BUTTERFLIES.—Being a complete Natural History of these beautiful insects. By EDWARD NEWMAN, F.L.S., F.Z.S., &c., &c. There is a life-size figure of every British Butterfly, drawn and engraved by the first Artists, regardless of expense, and a full description of each in the various stages of Caterpillar, Chrysalis and Butterfly; with an account of the food-plant, and full directions how to find, catch and preserve these Insects, and also a diagram figure, with explanations of the terms used.

 This work has a portrait of the Author from a photograph by Messrs. Maull and Polyblank.—Price 7d., post free.

Address, "EDWARD NEWMAN, 9, Devonshire Street, Bishopsgate, London, N.E."

THE INSECT HUNTERS

By EDWARD NEWMAN, F.L.S., F.Z.S.,
LATE PRESIDENT OF THE ENTOMOLOGICAL SOCIETY.

I HAVE written this little book expressly for those who do not pretend to call themselves experienced naturalists. I do not assume any knowledge on the part of the learner, but begin at the beginning, and attempt to educate the reader up to the point of understanding my more complete and extended 'Familiar Introduction to the History of Insects;' indeed, I am not altogether without a hope that some will call this inexpensive and unassuming book a sufficient Introduction to the Science.
EDWARD NEWMAN.

"UNRIVALLED AS A FIRST-BOOK IN ENTOMOLOGY."—*The late William F.R.S., one of the Authors of the celebrated 'Introduction to Entomology.'*

"In the 'Insect Hunters,' by Mr. Newman, the author has brought together in a very pleasing way, a great deal of really good entomological matter bearing upon habits, the economy and classification of insects. I can strongly recommend it to young persons who wish to obtain sound entomological information; and the tone in which the work is written is deserving of much commendation."—*Addressed to William Wilson Saunders, Esq., to the Entomological Society of London, Annual Meeting, 1858.*

"This is the first book from any author who understands the art of teaching Natural History pleasantly."—*Report of the Northern Entomological Society.*

"We know of no volume that contains so much information in so small a compass on the habits and economy of insects."—*Natural History Review, Edited by H. Holiday, Esq.*

"Undoubtedly the best and most useful of Mr. Newman's entomological works."—*H. T. Stainton, Esq., Entomologist's Annual for 1858.*

"There is a capital chapter on Metamorphosis, and the families in all the orders are given in a very concise and emphatic manner. *
FOR THE YOUNG who have not had their attention drawn to Entomology WE RECOMMEND THIS AN ADMIRABLE BOOK, one that a parent might give to his child without a fear that the contents were not strictly true."—*Entomologist's Weekly Intelligencer.*

"The descriptions are accurate, and the author is well acquainted with the facts on which he writes."—*Athenæum.*

"The conception of this little work is novel, and its execution excellent. * * * We have a small compass and in the most captivating and easy form, all the information really essential to the study of Entomology."—*Literary Gazette.*

"This is a little unassuming book, addressed by an experienced naturalist to an intelligent child, whom he leads by the hand through lanes, woods and meadows, showing her the living objects of his lessons, and explaining, in language adapted to childhood and youth, the habits and characters of each. We are spared all those tedious and intelligible technical explanations to which children will scarcely ever listen with patience, and which they never remember."—*The Friend.*

"This work forms a complete introduction to the science of Entomology, written in clear and graceful language."—*Kentish and Surrey Mercury.*
